

SOKRATHERM reference examples

The following examples are a small extract of roughly 2000 compact CHP units we have built and delivered, which have -in most cases for many years- proven in most various objects at most different places.

Accordingly various are also the customers which have trusted in us: Local utilities and power companies, BOO (Build-Own-Operate) companies, hotels, industry, municipalities and equipment manufacturers.

Typical application cases are:

- Hospitals and nursing homes
- Office and administration buildings
- Residential buildings
- Hotels
- Swimming pools
- Industrial sites
- Water purification plants and biogas plants
- Breweries
- Food processing plants

In Germany and many other European countries such as Italy, England, France, Spain, Ireland, the Netherlands, Belgium, Switzerland, Latvia, Estonia, Ukraine, Poland, Slovenia, Romania and Bulgaria as well as Chile and Argentina, SOKRATHERM compact CHP units provide for a reliable, eco-friendly and economically sound heat and power supply.

In the CHP unit type name, the first two letters stand for the fuel type (natural gas: GG, sewage gas / biogas: FG). The number means the nominal electric power in kW. At special configurations, an additional letter after the number indicates the configuration: D = Steam generation, T = Thermal oil heating, H = Hot cooling (95/80 °C instead of 90/70 °C flow / return flow temperature).
