

## SOKRATHERM reference examples

The following examples represent just a fraction of the over 2000 compact CHP units we have built and delivered. These units have consistently demonstrated their reliability over many years, installed in a diverse array of locations and settings.

Our clientele is rich in variety, comprising local utilities, power companies, BOO (Build-Own-Operate) entities, hotels, industries, municipalities, and equipment manufacturers—all of whom have placed their trust in our expertise.

Typical application cases are:

- Hospitals and nursing homes
- Office and administration buildings
- Residential buildings
- Hotels
- Swimming pools
- Industrial sites
- Water purification plants, biogas plants and landfills
- Breweries and food industry

In Germany and many other European countries such as England, Ireland, Sweden, Italy, France, Spain, Ireland, the Netherlands, Belgium, Switzerland, Austria, Latvia, Estonia, Ukraine, Poland, Slovenia, Romania and Bulgaria as well as Chile and Argentina, SOKRATHERM compact CHP units provide for a reliable, eco-friendly and economically sound heat and power supply.

In the CHP unit type name, the first letter stands for the fuel type (natural gas G, sewage gas / biogas: F) and the second one for Generator. The number indicates the electric power in kW. At special configurations, an additional letter after the number indicates the configuration: D = Steam generation, T = Thermal oil heating, H = Hot cooling (95/80 °C instead of 90/70 °C flow / return temperature). In the GK series of CHP units to generate compressed air and heat the letters stand for “Gasmotor-Kompressormodul” (gas engine compressor unit).
